UDOT Completes Last Bridge Move for I-15 CORE Project Saturday Morning

Provo Center Street Span is 25th Bridge Moved in Utah

Provo, Utah (April 9, 2011) - Construction teams on UDOT's Utah County I-15 Corridor Expansion (I-15 CORE) moved the final of six bridges by self-propelled modular transporters on the I-15 CORE project at 7 a.m. Saturday morning. The bridge is a piece of the new Provo Center Street interchange and was the 25th bridge moved by UDOT.

The Provo Center Street bridge is 120 feet long and 90 feet wide, and was the second bridge moved this week as part of the Provo Center Street interchange reconstruction. Because it did not require a full freeway closure, the bridge move took place during the day. Despite the snow, crews were able to move the bridge in about 90 minutes. Provo Center Street will reopen Monday.

The Provo Center Street bridge is one of 63 bridges that will be new, rebuilt or modified on the I-15 CORE project. It is also for the new Provo Center Street interchange that is one of 10 freeway interchanges being rebuilt or reconfigured. The interchange and the 24-mile freeway reconstruction project is scheduled for completion in December 2012.
